JOHAN JAEL LÓPEZ REYES

Software Developer | Full-Stack Developer

PROFESSIONAL PROFILE

Full-Stack Developer and Data Analyst experienced in building, optimizing, and deploying scalable enterprise applications. Specialized in the Laravel ecosystem, React, and TypeScript, focused on designing decoupled architectures, process automation, and relational database optimization to improve operational efficiency.

WORK EXPERIENCE

Corporación Azul
March 2026 – Present | Morelia, Michoacán

Web Developer & Data Analyst

- Development and maintenance of corporate web sites and applications, participating in the entire lifecycle from requirements analysis to deployment.
- Built backend solutions using PHP/Laravel, integrated REST APIs, and managed MySQL databases.
- Engineered business process platforms, including data processing features, automation, and data validation.
- Executed backend code re-engineering and database optimization, significantly improving availability and response times for critical applications.

PIHCSA
October 2025 – March 2026 | Morelia, Michoacán

Backend Developer & Systems Auditor

- Designed and developed a web platform for medical asset management and tracking using Laravel, JavaScript, and MySQL.
- Transformed operational requirements into structured software modules and features.
- Implemented automation processes to reduce time required for auditing tasks and information queries.
- Developed backend functionality, handled roles and permissions, and implemented system activity logging.
- Utilized Git/GitHub for version control and collaborative development organization.

FEATURED PROJECTS

Web Platform – Corporación Azul

Laravel · React · TypeScript · Headless WordPress · Git

Designed and developed a web platform to centralize internal processes and tools. Participated in requirements definition, functional architecture, tech stack selection, and MVP scoping. Currently in active development.

Asset Management Platform – PIHCSA

Laravel · PHP · MySQL · JavaScript · Git

Web application to centralize tracking, querying, and auditing of medical assets across facilities.

Circuito Toluca 2026

React · JavaScript · REST APIs · Stripe

Developed participant registration features, integrated external payment processing services, and implemented real-time availability tracking.
